This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No. 101091531

Why EASI ZERO?

EASI ZERO addresses the importance of sustainable material choices in building renovation. This enables European buildings to reach both high energy performance and low emissions, moving us closer to reaching EU climate goals.

Seven highlights of the EASI ZERO building envelope component package:

- Bio-based and recycled materials
- High level of thermal performance
- Compatible to all building typologies
- Assessed lifecycle performance at building scale
- Easy and fast to install and dismantle
- Near zero embodied energy and CO₂ emissions
- Documented environmental, social, and economic impacts
